

Incite Social Media Export

Incite MAM has a Social Media (SM) module that allows you to export Single or Multiple files, Edited Timeline (sequence) or Clip (part of a file). It will automatically generate the file format expected by the different social media platforms and will upload using the appropriate API.

On export, the user can select the desired aspect ratio and format that is needed and can preview and position the video based on the output size. For example to center a speaker on a square output.

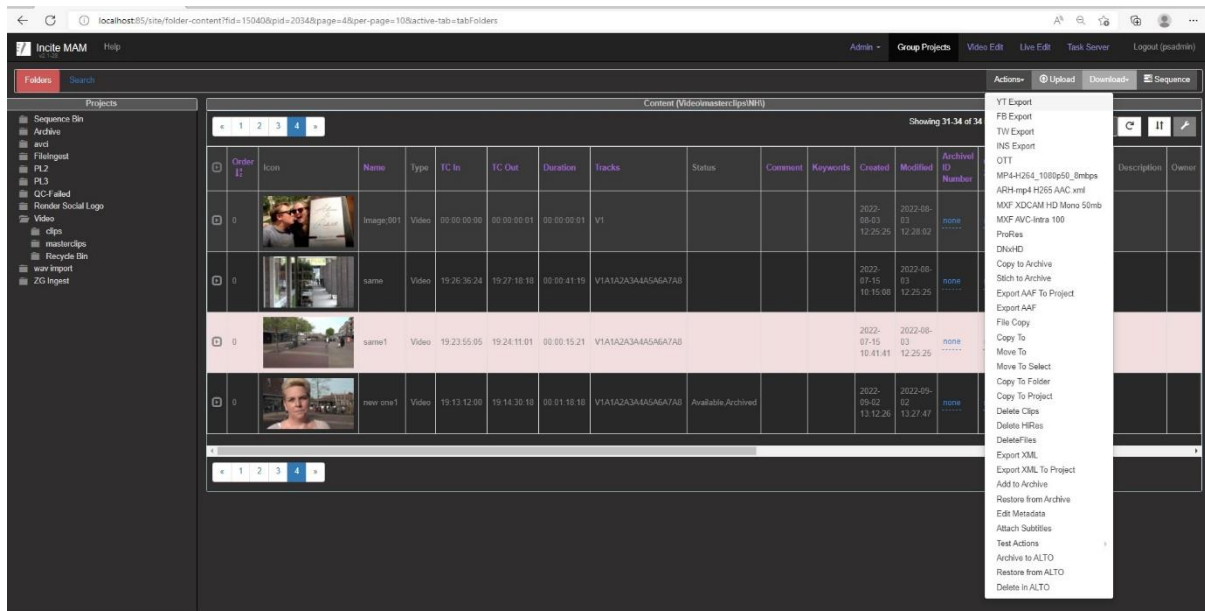

On the Render button select EXPORT-SOCIAL and destination and the system will submit the export task.

By default, the entire timeline is exported but the user can set an export region using ALT+I and ALT+O.

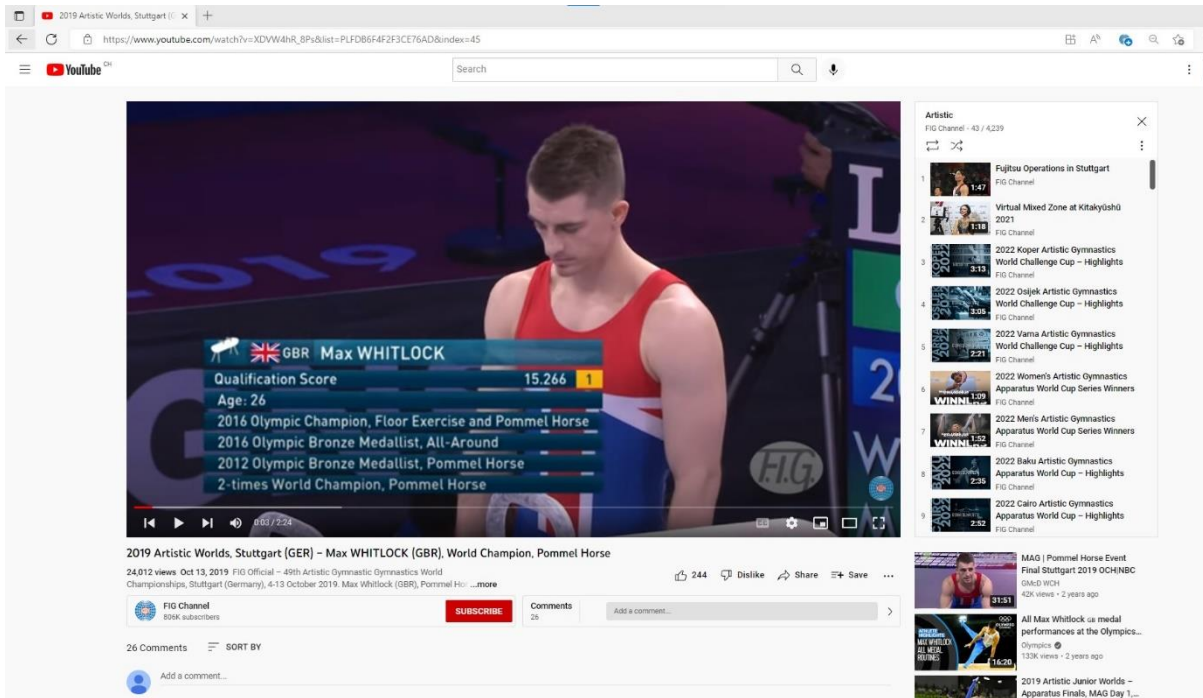

Exporting one file or multiple files is also available using different presets configured in the MAM WEB GUI interface.

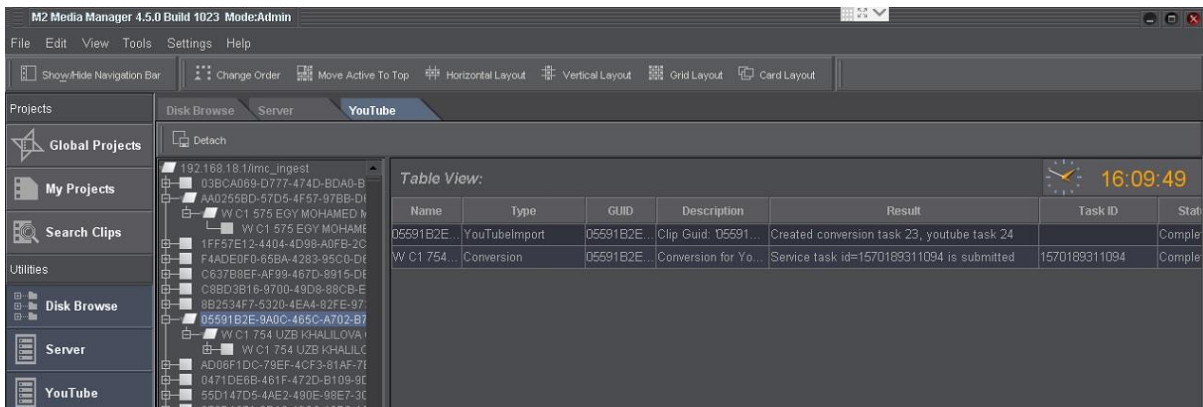

On each export the user has the choice to automatically add by the system an Intro, Extro, Logo or Subtitles.

Export of subtitles can be either burn-in or exported and uploaded as a separate file.

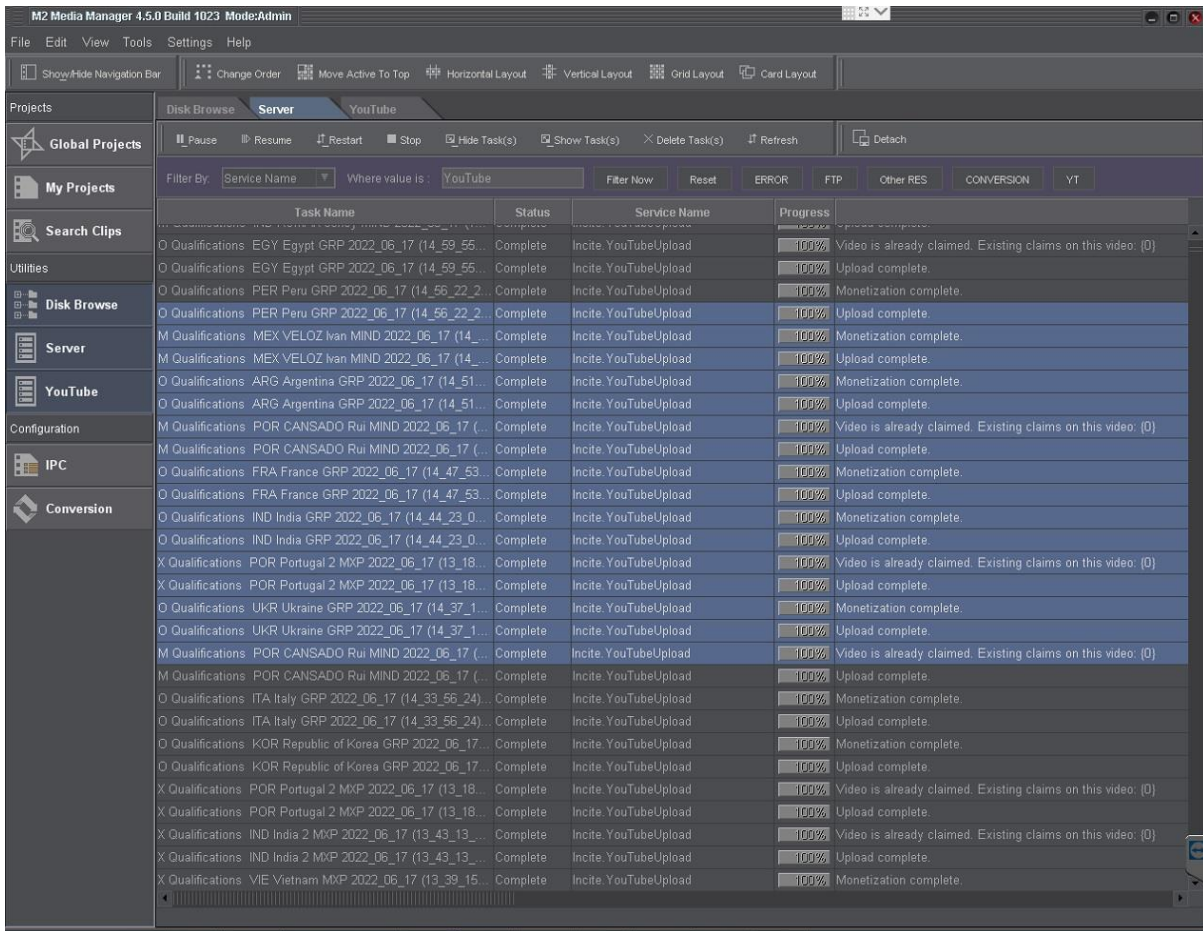

Metadata export with full description, Tags and Categories etc is also available.

Workflow engine and different watchers are also available to allow the user to setup their preferred SM export in different steps.

The Task Server view allows users to monitor the status of their tasks.

The screenshot displays the 'Task Server' view in M2 Media Manager. The interface is organized into several sections:

- Menu Bar:** File, Edit, View, Tools, Settings, Help.
- Toolbar:** Show/Hide Navigation Bar, Change Order, Move Active To Top, Horizontal Layout, Vertical Layout, Grid Layout, Card Layout.
- Navigation:** Projects, Global Projects, My Projects, Search Clips, Utilities, Disk Browse, Server, YouTube, Configuration, IPC, Conversion.
- Task Server Table:**

Task Name	Status	Service Name	Progress
